FOREIGN CROPS AND MARKETS

ISSUED WEEKLY BY THE BUREAU OF AGRICULTURAL ECONOMICS.
UNITED STATES DEPARTMENT OF AGRICULTURE, WASHINGTON, D. C.

VOLUME 20

January 6, 1930

No. 1

Feature of Issue: UNITED STATES AGRICULTURAL EXPORTS FOR NOVEMBER

GRAIN AND POTATO PRODUCTION IN GERMANY

The 1929 wheat production in Germany was 123,090,000 bushels, according to the official estimate issued at the end of December and cabled to the Foreign Service of the Bureau of Agricultural Economics by Agricultural Commissioner L. V. Steere at Berlin. This estimate is 7,535,000 bushels greater than the previous estimate issued in August but is about 13 per cent below the 1928 production of 141,593,000 bushels. The estimates of the other grain crops have also been increased. The estimate of the rye production has been increased 1,732,000 bushels to 321,045,000 bushels as compared with 335,499,000 bushels in 1928. The barley production has been increased by about 8,500,000 bushels to 146,101,000 bushels, a decrease of 5 per cent from the 153,721,000 bushels raised in 1928. The oats production has been increased by more than 27,000,000 bushels to 508,643,000 bushels, an increase of 5.5 per cent over the 481,960,000 bushels in 1928, and is the largest production since 1914. The estimate of the potato crop has been increased nearly 60,000,000 bushels to 1,472,563,000 bushels as compared with 1,516,573,000 bushels in 1928. See table, page 32.

- - - - -

CURRENT MARKET CONDITIONS

Prices in the German hog market were somewhat stronger in the second half of December than earlier in the month, according to cabled advices from Agricultural Commissioner L. V. Steere at Berlin. The recent level at Berlin of about \$17.60 per 100 pounds, however, while slightly below the November average, was about \$1.65 higher than the average for December 1928. Receipts during December 1929 ran lower than a year ago, but there is an upward tendency. In the Hamburg lard market, late December prices weakened further, the average for the week ended January 1 reaching the unusually low level of \$12.14 per 100 pounds. See table, page 37.

In the British cured pork market, prices at the end of December were lower than the average for the whole month, with Danish Wiltshires as the only item usually noted in this space to retain its lead over a year ago. According to cabled advices from Agricultural Commissioner Foley at London, the average of Liverpool quotations on American green bellies slipped to \$18.36 per 100 pounds, while American short cut green hams were down to \$21.72. Liverpool cured pork stocks as of December 31 were unusually heavy for that date. For the first time since September there were quotations on Canadian green sides, which ran higher than those of early January 1928. Lard quotations were up slightly at \$11.73, but substantially under last year's levels. See table, page 37.

C R O P A N D M A R K E T P R O S P E C T S

B R E A D G R A I N S

Wheat production in 1929

The 1929 wheat production in the 40 countries so far reported now totals 3,271,309,000 bushels which is 14 per cent below the production of 3,803,227,000 bushels in the same countries in 1928. Upward revisions have been made in the European and Asiatic estimates but the North African total has been lowered as shown in the table on page 27. These revisions increase the total as reported by the Northern Hemisphere countries by only 0.3 per cent and total production remains nearly 10 per cent below 1928. The total production in 3 Southern Hemisphere countries is nearly 44 per cent below 1928.

Foreign growing conditionsEurope

Above average temperatures and scattered heavy rains were general over Europe during the week ended January 2 according to a cable from Agricultural Commissioner L. V. Steere at Berlin. The greater part of the country is either without any snow or has only a light covering. In Russia normal winter temperature prevailed during the week, with intermittent precipitation and local storms. The winter wheat acreage sown this fall is the same as last season, when an area of 15,600,000 acres was sown to winter wheat, according to official sources. The increase in the total winter sown acreage this season is reported to be due chiefly to increased sowings of rye.

Southern Hemisphere

Temperatures were abnormally high in Argentina during the week ended December 30 according to reports received by the United States Weather Bureau. A mean temperature of 79° was reported for each zone, being 5° and 7° above normal for the northern and southern areas, respectively. Precipitation was subnormal in each district. Only 0.1 inch of rain fell in the southern wheat areas and 0.6 inch in the corn and northern wheat zone. General rains delayed the wheat harvest in southeastern Australia.

Movement to marketUnited States

The exports of wheat from the United States from July¹ to December 28, 1929 were 91,577,000 bushels against 100,795,000 bushels during the same period of 1928. Exports during the week ended December 28 were 1,779,000 bushels against 1,190,000 bushels during the previous week and 2,036,000 bushels during the week ended December 29, 1928.

C R O P A N D M A R K E T P R O S P E C T S , C O N T ' D

Canada

Stocks of wheat in the Western Grain Division of Canada on December 27, 1929 were 153,628,000 bushels against 152,547,000 bushels on December 20 and 137,385,000 on December 23, 1928. From December 6, when stocks reached the low point prior to the closing of navigation on the lakes, stocks of wheat have increased approximately 3,500,000 bushels as against an increase of more than 18,000,000 bushels during the same period in 1928. Receipts at Fort William - Port Arthur during the week ended December 27 were 1,232,000 bushels and shipments were 499,000 bushels. Receipts at Vancouver during the week were 891,000 bushels and shipments were 724,000 bushels.

Russia

Total grain procurements of the state and cooperative procuring organizations of Soviet Russia (U.S.S.R.) by December 20, exceeded the "plan" for the 1929-30 marketing year by 4 per cent, Mr. Steere reports. The procurements of bread grains alone, however, were 6 per cent below the "plan". The share of wheat in the total procurements was 31 per cent, compared with 46 per cent last year and 49 per cent two years ago. The share of rye increased from 11 per cent last year to 21 per cent this year, but was still below that of two years ago, when it amounted to 23 per cent of the total procurements. An increased share of feed grains is reported in this year's procurements.

European market conditions

The European wheat markets continued firm and a fair amount of business was done during the week ended January 2, according to Mr. Steere. Rye markets, however, continued weak. The spot price of domestic wheat at Hamburg on December 31 was \$1.67 per bushel as against \$1.65 on December 26. The spot price of domestic rye at Berlin was \$1.03 per bushel on December 31 as against \$1.04 per bushel on December 26.

United States wheat prices

Domestic wheat markets were somewhat nervous during the week ended January 2, but prices were about maintained at the higher levels reached during the previous week although there was a decline following the New Year holiday. A considerable decrease in the domestic visible supply and a fair export demand were strengthening factors. May futures at Chicago closed at approximately 135 cents on January 2 as compared with 136 cents December 26 and 119 cents last year. Winnipeg May futures were unchanged at 146

CROP AND MARKET PROSPECTS, CONT'D

cents as compared with the close of December 26. Liverpool May futures closed at 148 cents January 2, the same as a week before also, as compared with 132 cents last year. February futures at Buenos Aires closed one cent higher on December 31 as compared with the price of 125 cents on December 24.

During the week ended December 27 cash wheat markets strengthened and prices recovered somewhat from the low point of the previous two weeks' decline. An advance in all classes of wheat attributed to an advance of three cents in the weighted average cash price of all classes and grades at six markets to 123 cents per bushel as compared with 106 cents last year. No. 2 hard winter at Kansas City and No. 1 dark northern spring at Minneapolis each advanced four cents to 122 cents and 132 cents respectively; while No. 2 amber durum at Minneapolis and No. 2 red winter at St. Louis each advanced three cents to 122 and 135 cents respectively. The price of western white as indicated by the average of cash quotations at Seattle advanced two cents to 124 cents per bushel. The indications are that average cash prices for the week ended January 3 will be higher than during the previous week. The spread between cash closing prices at Minneapolis and Winnipeg remained unchanged at eight cents in favor of Winnipeg as compared with a spread of two cents in favor of Minneapolis last year.

Rye production in 1929

The 1929 rye production in 23 European countries now totals 890,550,000 bushels against 890,903,000 bushels in 1928. The first estimate of the total Italian production is 6,863,000 bushels, which is 5.0 per cent greater than the 1928 production. See table page 27.

FEED GRAINS

Barley

The total 1929 barley production in 38 countries so far reported now amounts to 1,414,327,000 bushels, a decrease of 1.6 per cent from the production in the same countries last year. Several preliminary estimates and revisions in Europe have raised the total for the 26 countries reported to 743,277,000 bushels, an increase of 8.4 per cent over that of last year. See barley production table, page 28.

Exports of barley from the United States, Canada, Argentina and the Danubian countries from July 1 to the latest dates available amount to 71,226,000 bushels, an increase of 1.2 per cent over the shipments during the same periods last year. See barley trade table, page 31. United States exports during the week ended December 28 were lower than for any

C R O P A N D M A R K E T P R O S P E C T S , C O N T ' D

- - - - -

of the preceding three weeks. There was little change in United States barley prices during that week. No. 2 barley at Minneapolis remained at 53 cents per bushel, a price 4 cents below that of the corresponding week last year. See table showing barley prices, page 32.

Stocks of barley in store in the Western Grain Inspection Division of Canada on December 27 stood at 23,237,000 bushels, compared with only 12,585,000 bushels on the same date in 1928 and 7,018,000 in 1927. Receipts of barley at Fort William, Port Arthur and Vancouver from August 1 - December 27 amounted to 14,071,000 bushels, while shipments during the same period totaled 4,353,000 bushels.

Oats

The 1929 oats production in the 34 countries so far reported totals 3,482,969,000 bushels, a decrease of 6.6 per cent from the production in the same countries last year. Various preliminary estimates and revisions in the 25 European countries reported have changed the European total to 1,860,742,000 bushels, or 6.8 per cent above the amount raised in these countries last year. See oats production table, page 29.

Exports of oats from the United States, Canada, Argentina and the Danubian countries from July 1 to the latest dates available total 15,198,000 bushels, a decrease of 28.2 per cent from the exports during the same periods last year. See oats export table, page 31. United States exports during the week ended December 28 remained very small, while prices increased slightly. No. 3 white oats at Chicago advanced 2 cents to 46 cents per bushel, which was the average price during the last two weeks in December, 1928. See table showing oats prices, page 32.

Stocks of oats in store in the Western Grain Inspection Division of Canada on December 27 amounted to 15,437,000 bushels compared with 13,754,000 bushels on the same date last year, and 8,981,000 bushels in 1927. Receipts of oats at Fort William, Port Arthur, Vancouver and Prince Rupert from August 1 - December 27 totaled 2,602,000 bushels, while shipments during the same period amounted to 5,798,000 bushels.

Corn

The 1929 corn production as reported in 19 countries, including various revisions now totals 3,436,235,000 bushels, an increase of 2.7 per cent over the crop in the same countries last year. The total for the 10 European countries reported now amounts to 671,759,000 bushels, a figure 28.8 per cent above that of 1928. See corn production table, page 30.

CROP AND MARKET PROSPECTS, CONT'D

- - - - -

The temperature in the corn zone of Argentina was abnormally high during the week ended December 30, or 5° above normal, according to the United States Weather Bureau. Precipitation was sub-normal, being only 0.6 inch in the corn zone. These conditions are not regarded as being favorable to the growth of the corn at this time of the year.

Exports of corn from the United States, the Danubian countries, Argentina and the Union of South Africa from November 1 to the latest dates available total 37,590,000 bushels, a decrease of 13.5 per cent from the exports of these countries during the same periods last year. United States exports during the week ended December 28, although small, showed a gain over the previous week. The Argentine exports during that week fell below 3,000,000 bushels, compared with exports of over 4,000,060 bushels for each of the preceding three weeks. See corn export table, page 31.

The cash price of No. 3 yellow corn at Chicago increased 2 cents to 39 cents per bushel during the week ended December 27, while May futures remained at 96 cents, these prices being 4 and 5 cents, respectively, above the prices for the corresponding week last year. Buenos Aires quotations on Argentine corn for January and May delivery remained at 73 and 71 cents, respectively, these prices being considerably below those of last year. There continues to be a spread of 25 cents per bushel between the May futures of United States and of Argentine corn. See table, page 32.

- - - - -

SUGAR

The world beet sugar crop is estimated at 9,866,000 short tons, raw sugar as compared with 10,178,000 short tons produced in 1928-29, according to revised estimates received from official sources and the International Institute of Agriculture.

The European crop, including Russia, according to the Institute's figures is placed at 8,708,513 short tons raw sugar as compared with an early estimate of 8,470,684. The revised estimate indicates a decrease of 3.2 per cent from last season when 8,997,641 short tons were produced. Excluding Russia, the European crop is only 0.9 per cent below that of 1928-29. Increases over the early estimates occur in several of the exporting countries including Germany, Czechoslovakia, Poland and Hungary. Production in Germany and Czechoslovakia is slightly below last year while in Poland and Hungary the crops show slight increases over last year. France and Italy which normally rank as sugar importing countries show increases over last year. Italy this year is expected to have a small surplus above domestic requirements.

C R O P A N D M A R K E T P R O S P E C T S , C O N T ' D

The Porto Rican sugar crop for the current season is officially estimated at 743,147 short tons as compared with 586,761 short tons produced in 1928-29, according to a report from I. L. Torres, Director of Agricultural Development of Porto Rico. The estimate for the new crop is only 5,530 short tons below the record crop of 748,677 short tons reported for 1927-28. The low crop produced in 1928-29 was the result of the hurricane in September 1927 which caused considerable damage to the sugar cane.

F R U I T , V E G E T A B L E S A N D N U T S

THE BRITISH APPLE MARKET: The demand for barreled apples was somewhat improved but was only slow to moderate for the various varieties of boxed apples on the Liverpool auction Monday, December 30, according to a cable received in the Foreign Service, Bureau of Agricultural Economics, from Mr. F. A. Motz, the Department of Agriculture's fruit specialist in Europe. Prices were still lower on an average than those reported December 18. This is to be expected as the market is usually sluggish during the Christmas holidays. Both boxed and barreled apple supplies were light and the fruit was in generally good condition except Washington Jonathans, a great many of which were poorly colored and in unsound condition.

Mr. Motz reports that the supply of English apples is diminishing and that the demand should show some improvement at higher prices; however, fancy prices are not expected. Canadian apple exports so far this season to the United Kingdom and the provinces are about equal to the total apple exports of last season. Deciduous fruit shipments from South Africa so far this season amount to 116,000 cases compared with 35,000 boxes in the same period last year. The shipments of plums and peaches have been especially heavy. Pears are expected to be heavy this week. More competition may be expected this year than last with deciduous and citrus fruits.

THE HAMBURG APPLE MARKET: Demand was somewhat weak on the Hamburg auction of Thursday, January 2, and difficulty was experienced in maintaining satisfactory prices, according to Mr. Motz. Prices on American boxed apples, however, were slightly higher than at the auction of December 13. A total of 22,500 boxes were sold on the auction. No barreled apples were sold.

RUSSIAN APPLES IN NORTHERN EUROPEAN MARKETS: The quality of apples from Russian Crimea offered in northern European markets is good and the packaging excellent, Mr. Motz reports. Russian apples are packed in standard boxes of the size used in the Pacific Northwest; they are well graded and

FRUIT, VEGETABLES AND NUTS, CONT'D

each apple separately wrapped. Labels used are the same as in America. It can be said that the pack compares favorably with that of the Northwest States. While at Hamburg, Mr. Motz reports seeing liberal quantities of Russian apples on display at the quays but not as many as were in evidence at Stockholm, where 15,000 boxes were stacked in the freeport. Stockholm is not so well situated as many European ports for direct shipments of apples from New York and Canadian ports; consequently the Russian supply has been drawn on. See Foreign Service release F.S./A-276, December 30, 1929. See also Foreign Service release F.S./A-275, NOTES ON THE NORTHERN EUROPEAN APPLE MARKETS, December 30, 1929.

AMERICAN APPLES MEETING MORE COMPETITION IN SHANGHAI: The United States and Canada are the principal sources of choice apples in Shanghai, China, but heavier supplies from competing sources, high prices, and the unfavorable exchange rate are restricting the demand for American apples at the present time, according to a radiogram from Agricultural Commissioner Paul O. Myhus at Shanghai. The bulk of domestic apples now in the Shanghai market is from Chefoo and consists of early varieties which normally are largely off the market this date. This season, however, considerable quantities are still available and there is an improvement in the quality. The bulk of sales is still of Chefoo varieties among which is quite a choice sweet, yellow winter variety packed in sixteen pound boxes. See Foreign Service release F.S./A-277, January 2, 1930.

AMERICAN CITRUS FRUIT IN NETHERLANDS AND NORWAY: California oranges are popular with the Dutch trade, according to a report received in the Foreign Service of the Bureau of Agricultural Economics from Mr. F. A. Motz, the Department of Agriculture's fruit specialist in Europe. The grading and packing of the American fruit is said to be largely responsible. Spanish oranges are preferred from the standpoint of flavor as they are very sweet and considered to be the best oranges arriving in the Netherlands. The Spanish crop comes on the market during the winter months. The demand for grapefruit in the Netherlands is small but increasing steadily. As in other Continental European countries, it is largely a question of propaganda and education. As little advertising is done in the Netherlands, people generally are not acquainted with this fruit, nor the method of its preparation.

Oranges are imported into Norway largely from Spain or are reshipped from other European markets. Direct shipments from New York, when shipped under refrigeration, cost approximately \$1.50 a box. This cost is too high to compete strongly with the Spanish fruit. When shipments are made in ordinary stowage, the fruit arrives in poor condition and the percentage of waste runs high. Brokers can secure direct shipments from California via the Panama Canal in carlots at a rate of \$1.05 per box (refrigerated), but the market cannot often take such large quantities and would prefer to buy through New York brokers because of their ability to secure broken lots.

FRUIT, VEGETABLES AND NUTS, CONT'D

* * * * *

The duty on oranges is only about 1/2 cent for 2.2 pounds while the duty on apples from August to February is about 8 cents per pound. After February 1st it decreased to 4 cents per pound.

- - - - -

LIVESTOCK, MEAT AND WOOL

- - - - -

FOREIGN PORK MARKET SITUATION: Unusually heavy export movements of American pork products marked the opening of the 1929-30 season in November. According to information available in the Foreign Service of the Bureau of Agricultural Economics, the United States lard exports for November 1929 were larger than for any November of recent years and rank with December and January 1928-29 as the outstanding export months since the 1923-24 season. Both Great Britain and Germany were heavy takers of lard in November. The larger exports were accompanied by sharp reductions in domestic cold storage holdings of lard, which, however, are still somewhat above last year. Prices, both domestic and foreign, continue weak. The United States inspected slaughter of hogs has shown the usual seasonal upward movement during the last three months, with the November total slightly larger than a year ago and higher than for any month since March 1928.

In cured pork also, the November export movement was unusually heavy for that month. In bacon, the figures were ahead of any November since 1925, with Great Britain and Germany both showing substantially increased takings. In hams and shoulders, the bulk of which goes to Great Britain, the advance over recent years was almost equally striking. The December 1929 prices on hams in British markets were lower than at the same time last year. In bacon, however, British prices for December retained a lead over last year, although lower than in the previous month. Liverpool stocks of cured pork continue conservatively higher than last year. British bacon imports from Denmark also were up during November, but reduced supplies from other European sources held the November total below that of a year ago. Continental hog prices are seasonally lower and slaughter has an upward tendency, but so far Denmark is the only important European pork producing country to show any material effects of the increased production program known to be under way. See Foreign Service release, F. S./HP-2, January 6, 1930.

LIVESTOCK MOVEMENT IN CANADA: Fewer cattle, calves and hogs and more sheep were sold at Canadian stock yards during the 52 weeks ended December 26 than in the corresponding period of 1928. According to the official Canadian Livestock Market Report for the 1929 date indicated,

L I V E S T O C K , M E A T A N D W O O L , C O N T ' D

- - - - -

the decline in total cattle and calf marketings reached 6 per cent compared with last year's figures, while hog marketings were down 3 per cent. The rise in sheep marketings, however, represented 15 per cent of the 1928 figures. Some details covering Canadian livestock slaughter and markets for the 11 months January - November 1929 as against the preceding year appear below:

Cattle and beef: Inspected slaughter of cattle and calves for the first 11 months of 1929 reached approximately the same number as in 1928. Total marketings, however, were 5 per cent less than in 1928, the November movement of commercial cattle being the smallest in years, according to the Canadian Government's "Livestock Market and Meat Trade Review" for November 1929. The buying power of the market was not considered as strong as a year ago, and this, combined with the fact that poultry was comparatively cheap, had a tendency to reduce the consumption of beef. The fact that pork was comparatively dear, on the other hand, was a point in favor of beef, states the same report. The store cattle demand was much better in the western provinces than in the east. The province of Ontario has been drawing heavily on its cattle supplies, according to this report, and a considerable volume of breeding stock has been liquidated. This, combined with the fact that the movement of store cattle back to the country was not much more than half of last year, indicates a sharp drop in next year's receipts.

Good butcher steers of 1,000 to 1,200 pounds averaged \$8.89 per 100 pounds at Toronto for the month of November against \$9.10 a year ago, and \$8.61 in 1927. There was evidently a rise in December as the average price for the week ended December 26 was \$9.50. Store cattle were very dull early in November but made a gain of 25 cents toward the close. A few prime steers reached \$10, while fair to good steers and heifers closed from \$9 to \$9.75, and common steers from \$7 to \$8.50. Under the strong demand for good quality cattle, baby beef strengthened and at the close of the month had reached \$15 per 100 pounds. Stores closed from \$6 to \$8.50 with a general top of \$8 for feeders. At Winnipeg, the principal western market, stockers and feeders were marked down 50 cents to 75 cents, and only reached \$7. Common stock sold at a very low figure. Only a few butcher cattle were able to bring \$8.50 to \$9. Adult cattle shipments to the United States fell off about 6,000 for the 11 months of 1929 against 1928, while calf shipments increased about 15,000. Indications are that in the new year choice and good quality cattle should find a strong winter and spring market, according to the Markets Intelligence Service of Canada.

L I V E S T O C K , M E A T A N D W O O L , C O N T ' D

- - - - -

Hogs: Sales at stockyards for the eleven-month period were 4 per cent under 1928, while inspected slaughter of hogs fell 8 per cent. Indications are that future supplies will continue very moderate in volume. Costs of producing pork during the next six months or more are likely to be quite high, states the "Meat Trade Review", and, therefore, prices may be expected to be maintained at a higher level than that of last year.

Bacon hogs at Toronto opened at \$10.25 in November, advanced to \$10.50, and closed at \$9.50, while at Montreal the ruling price for the month was \$11.75. Average prices for select bacon hogs at Toronto for the month of November were \$12.05 against \$10.06 a year earlier, while the average price of select bacon hogs for the week ended December 26 was \$13.04, and for bacons \$12.52. For the first 9 months of the year, imports of bacon and hams from the United States were twice as great as for the entire year 1928. On the other hand, live hog exports to the United States have fallen off from 21,000 last year to 2,000 this year, while both bacon and pork exports to the United States are also considerably lower.

Sheep: Approximately 17 per cent more sheep were marketed during the first 11 months of 1929 than during the same period of 1928. Slaughtering also was 15 per cent above 1928. The market was generally steady and active and, if anything, showed a tendency to move upward. There has been a very good inquiry for breeding ewes during the past few months, and a further expansion in lamb production may be expected. The average price for good handyweight lambs for November was \$11.60 against \$11.49 in 1928, with handyweight sheep at \$5.91 against \$4.96 in 1928. For the week ended December 26, 1929, good handyweights reached \$12.22 with sheep at \$6.51.

SLIGHT DECLINE IN EUROPEAN BUTTER PRICES: General slight declines in prices of butter in European markets during the week ended January 2 were more than met by the further decline of domestic prices. Copenhagen declined to the equivalent of 36.2 cents from 36.9 cents a pound. Danish butter in London at 38.5 pents on January 2 was half a cent higher than 92 score in New York at 38 cents. The London market was reported slow. See table, page

UNITED STATES AGRICULTURAL EXPORTS IN NOVEMBER

The index of United States exports of principal agricultural products for the month of November 1929 was 150, duplicating the index for 1925 and lower than any corresponding month since 1923. Smaller exports of cotton and wheat and an active foreign demand for American pork, lard, and tobacco were the outstanding features for the month. With the exception of 1927, exports of cotton fiber were lower than during any November since 1923. Both Germany and the United Kingdom took much less cotton than during November last year, exports to Europe as a whole showing a decline of 28 per cent and to Japan a decrease of 25 per cent as compared with the same month a year ago. Total exports of cotton so far this season, August 1 - November 30, 1929, were 13 per cent behind those for the same period a year earlier.

Except for November 1917, 1923, and 1925, exports of wheat and flour were lower than any corresponding month during the last 15 years. During the 5 months ended November 30, 1929, total exports of wheat and flour show a decrease of 11 per cent as compared with the corresponding 5 months of 1928. Foreign markets absorbed larger quantities of American pork and lard, continuing the upward trend which set in during the latter part of 1928, the index of lard reaching 211, a record figure for November, and cured pork amounting to 83, the highest November index since 1925. Exports of leaf tobacco, while a little below those for November last year, continued in heavy volume, but there was a noticeable decline in exports of fruit, more especially fresh apples, dried prunes and raisins, which lowered the index to 407, the lowest November index since 1925. Exports of dairy products continued downward, the index amounting to 171, a new low record for the month.
